NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

COPYRIGHT LAWS AND REGULATIONS GOVERNING OWNERSHIP OF MATERIALS REPRODUCED HEREIN REQUIRE THAT DISSEMINATION OF THIS PUBLICATION BE RESTRICTED FOR OFFICIAL USE ONLY.

Text This issue--Index

- p. 2 The first 1,100 Italian industrial and commercial companies
- p. 7 IL MONDO's classification
- p.51 The first 250 Italian banks
- p.54 IL MONDO's classification
- p.64 The first 80 Italian insurance companies
- p.68 IL MONDO's classification
- p.72 The first 70 Italian finance companies
- p.73 IL MONDO's classification
- p.75 Index of industrial firms
- p.81 Index of banking firms

Director: Paolo Panerai

Editor-in-Chief: Roberto Tabozzi

Issued by IL MONDO's research bureau

IL MONDO, extremely punctual, is keeping its second appointment with the complex and changeable Italian and worldwide economic reality. And this year, the X ray is more complete, more detailed: the 1,000 companies of last year, which represented the Italian business panorama, have increased to 1,500.

Another innovation is the indexes in which the 1,100 Italian industrial and commercial companies (last year there were 750) are classified on the basis of sales, cash flow and company resources and the 250 banks (200 last year) are also differentiated through three classifications: collections, company reserves and net profit.

A noteworthy technical and organizational effort has been made involving IL MONDO's research bureau, together with CORRIERE DELLA SERA's CED, Data Processing Center, in a difficult, long and exacting work. We are now pleased to be able to offer IL MONDO's readers a single publication giving the Italian

FOR OFFICIAL USE ONLY

editorial panorama, to be able to bring to the desks of tens of thousands of workers, professional men and women, businessmen, union members, scholars and students an increasingly sophisticated instrument, which, at any moment, can give a complete picture of individual firms and of the various productive sectors. Up to now, the possibility of having such a set of statistics at hand was reserved to a few privileged individuals: shareholders, clients and certain friends of Mediobanca. Now it is in the hands of all IL MONDO's readers; never had any Italian newspaper, any publishing house, attempted to compile such a vast and complete study.

The criteria followed in drawing up the various classifications and analyzing the balance-sheet information are explained in the following pages. At this point, we want to emphasize, as we did last year, that the philosophy which inspired us is not one of competition but rather that of giving the most thorough X-ray picture possible of the Italian firms in a year of hope and difficulty as experienced in 1977. Therefore, the various data reported aim, via reports and comparisons, to lay bare the positive and negative aspects of each firm and sector.

It is probable that there might be some omissions in the classifications; if so, we apologize to our readers and any other interested parties; any omissions would be only in the lower positions. They would not be due to arbitrary exclusion by IL MONDO but rather to a lack of information from a few company administrators from whom information was requested several times. However, the panorama which IL MONDO is proud to offer with this issue is the most comprehensive possible on the complex Italian and worldwide economic reality. This issue will be good for 1 year and, we hope, will succeed in resolving many of our readers' information problems. Furthermore, we promise our readers that, in 1979, we shall again punctually keep our appointment.

The First 1,100 Industrial Firms

The first 25 Italian firms have a sales of 32,535.5 billion lire, which represents 38.1 percent of the total of the 1,093 companies surveyed. However, it is to be pointed out that the increase in sales is less than the average for the larger companies: only 13 percent compared with 23 percent for all firms. Even taking into consideration the discorporation of productive divisions made by Fiat, the increase in sales is less than last year's rate of inflation and indicates a loss of potentiality by our large firms in real terms.

Even the other areas surveyed turn out to be less favorable for large firms than for medium and medium-to-small firms. The ratio between company resources and net fixed assets, which is 38.1 percent for the 25 large companies, rises to 43 percent for all firms surveyed (variations calculated with homogeneous information, that is, information which takes into consideration the lack of certain significant data).

Thus, financial debts, which are about 2.5 times company resources for the large companies, drop to about 2.3 times the total surveyed for medium and

FOR OFFICIAL USE ONLY

small firms. The figures would be still more favorable for small firms, if finance charges did not make such an impact on net sales for the group as a whole.

In fact, interest paid out ate up 5 percent of the proceeds from sales, almost a third of the entire cost of labor. We could theorize that it would require a reduction of only 4 points on the cost of borrowing money to bring the industrial sector back into the black. In fact, among the firms we surveyed, each point less of interest paid out means a saving of a full 350 billion.

The first 25 positions in the list are occupied especially by firms operating in the petroleum sector with nine companies, the machinery sector with six companies and the chemical sector with three companies. It would be difficult to make a comparison among the various companies of a given group due to the dissimilarity of the activities in which they are engaged.

However, it is possible to have an overall idea of the progress of certain sectors and, especially, of how the industrial sector as a whole fared in 1977. And this confirms the unfavorable economic situation which prevailed.

For example, the first 50 companies lost 1,200 billion lire⁷. But the overall data should not be misleading. The 1,500 billion in losses of all companies surveyed are concentrated even more than the sales. Three companies alone lost a total of 1,100 billion. The "oscar" goes to Montedison with a loss of 509 billion. But Italsider with losses of 395 billion and Anic with losses of 190 billion were also not jesting. When we add to these losses those incurred by Alfa Romeo (about 100 billion), Montefibre (100 billion) and Snia Viscosa (50 billion), we see that 1977 cannot be considered completely negative for many medium-sized firms.

The fact remains that it is once more the medium-sized industry which is the country's healthy sector, the one on which we can count for a revival of our economy.

One of the limitations of IL MONDO's classification is due to the lack of consolidated balance sheets. To cite an example, this is the case with Fiat which, disorporating its own productive divisions, seems to decrease its own importance in the industrial sector. However, there are various companies in the group listed for which it is not possible to summarize the results because of intercompany data which would falsify the significance of the figures.

This does not hold true just for Fiat. There are other companies, at a lower level, which would take on much more importance, if they were shown on the basis of the consolidated balance sheet: for example, Comital would show a consolidated sales of 42.1 billion rather than the 23.7 billion shown for it as the head of the group only.

FOR OFFICIAL USE ONLY

One of the commitments IL MONDO is making with its readers is to add a classification for group balance sheets in the near future in order to furnish a broader perspective in view of our country's economic and industrial progress.

During the work carried on by IL MONDO's research bureau, the problem was encountered of companies which do not close their books on the basis of a 12-month fiscal period. We preferred to furnish the figures in question, even though the comparison with the previous fiscal period cannot be considered significant.

For example, Palmera, which has a balance sheet covering 18 months, has sales of 20.3 billion when figured on the basis of 12 months; the same applies to the companies in the Cantoni group (Cantoni Satilai, Dafelle, Tessiture Cantoni, Cantoni Mastercoat), which have a balance sheet covering only 8 months.

THE BIGGER THEY ARE THE MORE THEY LOSE
(in billions of lire)

Industrial-Commercial Companies	Net Sales 1977	Net Sales 1976	Added Percent	Value	Cost of Labor	Finance Charges
The first 25	32,535.5	28,798.3	+12.98	9,063.7	6,028.2	-1,650.0
From 26 to 50	8,546.8	7,035.9	+21.47	2,086.4	1,574.1	-214.6
Total 1,093 firms	85,495.1	69,338.4	+23.30	23,001.7	15,612.5	-4,023.6

	Net Profit	Cash Flow	Net Fixed Assets	Company Resources	Financial Debts
The first 25	-1,002.0	1,080.6	17,195.9	6,555.8	16,124.3
From 26 to 50	-184.6	170.1	1,775.4	1,039.2	2,607.4
Total 1,093 firms	-1,506.9	2,572.0	33,950.1	14,558.9	34,705.9

Interpretation of the Table

The classification of the principal industrial and commercial companies was compiled on the basis of net sales, showing all items of the balance sheet except taxes and plus and/or minus values. Here are the items in detail:

Sales. Sales were based on the net value of eventual returns from customers as well as on commercial discounts and reductions. Moreover, in the case of petroleum and sugar companies, manufacturing taxes were deducted, since it is not a question of sales of the company's products but, rather, a pure and simple collection service, which the state finds it convenient to have carried

FOR OFFICIAL USE ONLY

on by the producers. The same concept was applied to pharmaceutical companies in regard to discounts to mutualistic groups. The significance of sales needs no comment. Companies produce to sell, and sales provide the first (and most significant) possibility of measuring a company.

Added value. The added value was calculated by algebraically adding sales with stock variations and then adding labor as a separate account as well as various proceeds from normal administration. From this total we subtracted the general and administrative expenses, purchases and various charges of a standard nature. Taxes were not taken into consideration.

The added value is a very important factor in evaluating the profitability of the administration; it also gives a measure of the degree of risk. In fact, a very limited added value, in proportion to sales, can be a sign of high business risk, a risk which obviously must be judged in either a negative or positive sense.

As a matter of fact, other conditions being equal (that is, a partially static situation where other factors do not undergo any change), a minimum variation in sales (up or down) is enough to cause substantial variations in the added value and, therefore, to change the balance-sheet results, for better or worse, to a significant degree.

On the other hand, a high added value, in proportion to sales, provides greater assurance against risks of conjunctural variations but can invite competition attracted by the sector's profitability. Obviously, one cannot generalize, as it is possible that a good added value is due to a relatively high level in the cost of labor.

However, although every set of figures and every report can be useful in giving greater knowledge of a company's affairs, such a report can never be adequate by itself.

Cost of labor. This has been derived by taking into consideration direct charges, indirect charges and reserves for the personnel liquidation fund. Considered by itself, that is, as an absolute value, it is not very indicative. However, it is an important factor if related to other factors (sales, added value, number of employees and so on).

Finance charges. These charges were calculated at the net value of the financial proceeds and can give an evaluation of how much of the administrative profitability is consumed by an ill-balanced financial structure, especially in a period of high interest rates.

Cash flow. This is one of the most important factors in judging a company from the standpoint of administrative profitability. Cash flow can be considered from a financial viewpoint or from one of profitability. IL MONDO's research bureau gave preference to the profit concept specifically in order to seek a

FOR OFFICIAL USE ONLY

measure of the profitability. Thus, the cash flow was derived from the sum of the net profit and amortizations in order to preclude the amortization policy used by various companies.

Company resources. This includes share capital and reserves without taking the results of the fiscal period into consideration. However, it does not include that part of the profit which has possibly not been distributed. It does include precautionary allocations which can clearly be absorbed in the reserve fund.

Miscellaneous reserves. This includes all reserve funds (except possibly those included in the company resources) with the exclusion of the amortization fund, which was shown separately in order to determine the net fixed assets and to permit the reader to calculate the degree of amortization of the equipment.

Financial debts. This includes all debts involving interest. The figure given represents the sum of the loans over the medium and long term as well as bank loans over the short term. Even bank loans of a commercial nature have been included, for, in a complicated administration such as that of a company, it is not possible to separate commercial loans from those made for financing purposes. Therefore, IL MONDO's choice was to give preference to the cost of indebtedness.

Working capital. This covers the capital used by a firm for normal operation; it is derived from the algebraic sum of the stock, liquid assets, commercial credits and commercial debts.

FOR OFFICIAL USE ONLY

The First 250 Banks

This list has been compiled in accordance with conventional precepts, that is, choosing collections as a parameter and considering those collections as the sales of a credit institution. To have a better understanding of the figures contained in this classification drawn up by IL MONDO, we have used the following methodology:

Collections. Includes clients' deposits (whether in pass books or in checking accounts), deposits made by other credit institutions and correspondent banks, bank drafts, debentures and real estate bonds in circulation and currency deposits.

Company resources. These include share capital, reserves, funds assignable to reserves (risk fund, fund for stock fluctuations, allowance for bad debts and the like), profits assigned to the reserve account and fund for the acquisition of the institution's own shares.

Cash and reserves with third parties. This includes deposits made in other banks and in the Banca d'Italia.

Shares and securities. This includes the total of the shares and securities according to the values contained in the balance sheet.

Fixed-income bonds. Includes ordinary treasury bonds, treasury credit certificates and other fixed-income bonds.

Cash credits. Includes the portfolio amount, current accounts with clients, credits made to associate banks, secured loans and cash receivables, and currency credits.

Although small, the increase in currency collections in 1977 was greater than the rate of inflation of the lira. This is the first bit of information that is revealed in analyzing IL MONDO's list of the first 259 banks operating in Italy. Another piece of information is that the increase in net profits was greater than that of collections; this shows how the banking system gets along better than the industrial sectors at a time of inflation and increased money circulation.

Although the analysis is limited to the first 50 banks, it is plain to see that collections increased on the average of 22.44 percent but in ways which differed within the individual groups of banks. The increase experienced by large institutions (the first 10) was limited to 20.09 percent indicating that they lost a share of the market to the medium and medium-to-small banks. In fact, the greatest increase was experienced by small banks with a rate of 29.59 percent.

Although it is apparent that some of the larger banks remained stationary, we can also see that a few gained a number of positions--namely, Banco ambrosiano

FOR OFFICIAL USE ONLY

(went from 18th to 16th position); Credito varesino (which gains three positions); Banca agricola milanese and Banca del Friuli (four positions); Banca popolare di Sondrio and Banca di Lodi, which gain six positions in regard to last year.

However, the following lost positions: Mediobanca, because of a certain difficulty in sustaining the rate of growth of the last few fiscal periods; Cassa di risparmio di Roma; and IBI, Istituto bancario italiano, which went from 15th to 17th position. However, the worst performance was that experienced by Banca del Sud (controlled by Banca di Sicilia), which lost 13 positions going from 14th to 147th position.

The variation in net operating profit between the large banks and the small is even greater, as the first 10 experienced a decrease caused by Banco di Napoli's loss of 10,766 million. The results showed up better particularly for banks in the third group, between the 21st and 50th positions, with an increase of 53.46 percent.

The first positions in the list are occupied by Banca nazionale del lavoro and three banks of national interest, the fourth position being occupied by Cassa di risparmio delle provincie lombarde immediately following Banca commerciale italiana and Credito italiano.

The lion's share belongs to institutions having public capital occupying eight of the first 10 positions. The first private bank is Banca nazionale dell'agricoltura, which is in 10th position. The positions among the first 10 banks remained almost unchanged in regard to the previous fiscal period, the only exception being Cariplo [Cassa di risparmio delle provincie lombarde], which knocked Banco di Roma out of 4th place.

The makeup of the second group of banks, from the 11th to the 20th positions, is different. Here we immediately find, beginning with the 11th position, the first of the popular banks, Banca popolare di Novara. Public influence is diminished in this group with only two banks, if we preclude Mediobanca which is an institute over the medium term. In fact, there are three savings banks, two popular banks and two private banks.

The influence of private banks and savings banks is felt to a greater extent among the credit institutions shown in the 21st to 50th positions. Among these 30 banks we have 12 private banks and 10 savings banks, while only three are institutions with public capital.

Although Banca nazionale dell'agricoltura occupies first place among private banks for collections, it should also be observed that there are two other large private banking groups, that associated with Banco ambrosiano and that controlled by Carlo Pesenti through Italcementi.

Examining the consolidated figures, we see how Banco ambrosiano manages to occupy first place among Italian private groups with collections of 7,189.8 billion

FOR OFFICIAL USE ONLY

(up 38.6 percent over 1976), ahead of the Pesenti group which shows collections of 6,793.4 billion (up 20.8 percent over the previous year).

The Ambrosiano group formed, in addition to Banco ambrosiano itself, by Banca cattolica del Veneto, Credito varesino, Banca Passadore and Banca Rosenberg also had an exceptional increase in net profits, which rose from 16.9 to 36.7 billion (up 117.4 percent); and the Pesenti group (IBI, Provinciale lombarda and Credito commerciale) also had outstanding results with net profits which rose from 9.1 to 12.0 billion (up 32.3 percent).

Nazionale agricoltura is then found in third position with collections of 5,580.3 billion (up 23.4 percent) but with a rather modest increase in profits (up 7 percent).

The classification for company resources is different with the first positions being occupied in the following order: Banca nazionale del lavoro, Cariplo and IBI, then followed by six banks having public capital and two popular banks, Banca popolare di Milano followed by Banca popolare di Novara.

The survey shows that, in addition to capital increases, company resources were influenced by emphasis on reserves permitted by the Visentini Law and by constant allocations to poor-risk funds made in the last few years and particularly in 1977. The average increase in company resources was, in fact, 23.96 percent, somewhat higher than that of collections.

FOR OFFICIAL USE ONLY

The First 80 Insurance Companies

The lists were compiled on the basis of the fiscal period's total direct and indirect premiums plus supplements. As technical aspects of the insurance administration, we have indicated premiums taken in for renewals and, on the other hand, premiums held back to offset actual exposure to risk to which each company is subject. The amount of technical reserves completes the elaboration of data relative to industrial activity. Investments were reported in terms of their overall value and analyzed in terms of their holdings in real estate and securities to which was added information relative to the company's liquid assets in order to furnish information on the policies of the various companies in regard to financial management, which, in the insurance sector, is complementary to technical management.

The year 1977 was definitely positive for the insurance industry. The companies' economic accounts showed substantial improvement in the profitability of the administrations and, in a few instances, showed a return to a profitable status after years of negative results.

A good part of the improvement is due to technical progress in the branch of civilian automobile liability [RCA] which benefited from tax levels more in keeping with requirements put out by the technical administration, from a greater personalization of the risk factor and from a reduction in the frequency of accidents. In general, companies which handle the RCA branch, which includes the vast majority of the companies listed, would have been able to close their books with still more positive indications, if the reduction in the frequency of damages had not been absorbed in large measure by an increase in the average cost of accidents, which rose about 30 percent, that is, at a rate decidedly higher than the rate of inflation.

Total premiums collected by insurance companies in 1977 exceeded 4,149 billion [lire] with an increase of 20.6 percent over the previous fiscal period, and, discounting the effects of inflation, the sector experienced growth in real terms. On the national level about 48.3 percent of the premiums paid covered automobile risks and 16.5 percent covered life insurance; these were followed by accidents and fire with a little more than 8.5 percent each, theft with 4 percent and civilian liability with 3.5 percent.

All remaining branches (aeronautics, credit and security provision, hail-storm, atomic risks, machine breakdowns, film, plate glass and employment risks) came to about 11 percent of the total premiums collected.

Assicurazioni Generali continues, uncontested, to head the list of insurance companies itself collecting about 828 billion lire of premiums (an amount which was greater than that of RAS [Riunione Adriatica di Sicurtà] and SAI [Società Assicuratrice Industriale] together. This increase over 1976 (a gain of 10 percent) is apparently modest when considered by itself; in reality, if one considers the establishment of two new companies controlled in Austria (which took

FOR OFFICIAL USE ONLY

78 billion lire of premiums away from the leading group), Generali's increase exceeds 20 percent.

Generali, which is much in evidence in IL MONDO's classification, is the only emerging part of the Trieste iceberg: 33 insurance companies controlled in 30 different countries and 31 associate companies for a total premium collection (parent company and associates) of more than 2,115 billion lire (up 21.7 percent over 1976).

With more than 330 billion lire of premiums RAS is in second place, even though its rate of growth was too slow (9.8 percent) with a certain loss of its share of the market. This company, controlled by Ital cementi di Pesenti through financial Italmobiliare, heads a group of 31 companies (9 Italian and 22 foreign) with overall premium collections of 1,182 billion lire (+16.6 percent). SAI, which saw its own premiums grow at a rate of 22.6 percent, although subsequently approaching RAS was not able to compete with its rival.

There are three noteworthy variations in regard to the first 10 positions: INA (Istituto nazionale delle assicurazioni) at grips with difficulties in the only branch in which it operates, life insurance, yielded two positions descending to sixth position in favor of the controlled company, Le Assicurazioni d'Italia, which rises to fourth position and of Assicuratrice (the RAS group), which occupies fifth position. Among outstanding variations in regard to companies which are becoming stronger, Lloyd Adriatico overtook Reale Mutua while Italia Assicurazioni of the Montedison group is continuing its march toward the high attainment of 14th position (it was 50th in 1962). Substantial increases in the absolute value of premiums collected were also made by companies which concentrate their activity in the automobile sector: Ausonia, Milano autoveicoli (which gained three positions) and Latina renana.

The largest profit, in absolute terms, was earned by Generali with 22,819 million, slightly more than the 22,265 million earned in the previous fiscal period. However, from a qualitative viewpoint we have a forward leap of considerable proportions: in fact, in 1976 the advantages deriving from the establishment of Generali Belgium had had a decisive influence, while this year the profit came entirely from the normal exercise of the insurance activity. In the numerical order of profits earned the following are close behind Generali: Toro with 6,059 million (1,882 in 1976), Compagnia Milano with 3,599 million (2,542 in 1976), RAS with 1,981 and Italia assicurazioni with 1,806. Among large companies which returned to a profitable status are: SAI (+998 from -2,843) and Assicuratrice (+312 from -1,876).

The greatest losses were made by Assicurazioni d'Italia (-9,254), Latina renana (-3,668) and Ausonia (-3,599).

The life-insurance branch, whose volume of business in Italy is estimated at about 686 billion lire, did not experience very favorable progress having an overall increase of about 5 percent in premiums collected. In fact, insurance

FOR OFFICIAL USE ONLY

savings in the form of medium to long-term investment is subjected heavily to the effects of inflation both in regard to the acquisition of new business and to the preservation of business already on the books. In fact, some companies, such as Toro and Tirrenia, even saw their overall business decrease, while others, such as RAS, saw a decrease only in the business conducted in Italy.

The list shows Generali's losing the first position to INA. However, thanks to the contribution made by Alleanza (third), Generali maintains a position of undisputed leadership on the national level. Then follow in this order: RAS, SAI, Toro and La Fondiaria (life-insurance branch).

Footnotes:

(a) The 1976 classification is purely indicative (except for the first five companies), inasmuch as this year's classification includes agencies of foreign companies and a few re-insurance companies.

The Banca nazionale delle comunicazioni is missing from the classification, the only credit institution which also operates in the insurance field.

(b) Assurances generales de France and Assurances nationales.

(c) For branches of foreign insurance companies the figures given for share capital apply to the endowment fund.

(d) The personnel refers to the entire group including the following companies: Vecchia mutua grandine, Cassa generale di assicurazioni and Mutuelle generale francaise Vie.

*The information for Unioniras is estimated, as the 1977 balance sheet has not yet been approved.

•At the net value of capital shares not yet deposited by shareholders.

This key and footnotes apply to tables on pages 68 to 71.

The First 70 Finance Companies

The overall gross value of participations at the closing date of the balance sheet (which is considerable, inasmuch as various finance companies close their accounting periods at different times not always coinciding with the calendar year) was the basis used for drawing up this classification. Financial investments (credits to associates, financings, fixed-income credit bonds and liquidity) were included in the figures in order to give the overall obligations of each company. Company resources are understood to be those before shareholder approval.

There was a changing of the guard at the head of the classification of the principal Italian finance companies: Stet, which for years occupied the leading position, was replaced in that position by Finsider obliged to underwrite a series of outstanding capital increases (Italsider, Dalmine, Terni) that were needed to avoid the financial collapse of the principal firms under its control. Finsider's leap upward, although far from representing a positive change, is perhaps the most tangible expression of the drama which the Italian iron and steel industry experienced in 1977 (and is still experiencing in 1978). Following its capital increase Finsider obtained a fleeting first position even in the classification of company resources ahead of Stet, which, however, in substance remains the largest Italian financial institution. In addition to the monopolistic regime by which the largest controlled firm (SIP /Italian Telephone Company/) carries on its activity, Stet's superior quality is shown in the industrial and economic efficiency of this group of companies as a whole, an efficiency which is paralleled by the structure of the company resources of the head group: 280 billion /lire/ of capital, 273 of reserves and nondistributed profits to which a profit of more than 30 billion will be added for 1977, all of which represents by far the greatest achievement in this sector for the fiscal period of 1977.

The third position held by Italmobiliare di Carlo Pesenti, which as last year gained a position, represents a further Pirro victory: most of the increase in the value of the participations is due to revaluations made with the aim of removing from the balance sheet a loss which growing finance charges had made truly enormous.

The gain of three positions made by Liquigas, which moves up to 4th place, and Bastogi's fall from 5th place to 10th show the extent of the absolute relativity of the figures. First of all, the growth in the value of the participations represents only an inflation of the balance-sheet figures beyond all economic logic; secondly, the reduction, due in large measure to devaluations or to an attempt to bring the gross values closer to probable realizable prices, represents a healthy resumption of awareness of company reality.
